

**LAPORAN PRAKTIKUM
PERANCANGAN DAN PEMROGRAMAN WEB**

MODUL 9 (PHP)

**Universitas
Telkom**

Oleh:

(Farhan Kurniawan) (2311104073)

**PROGRAM STUDI S1 REKAYASA PERANGKAT LUNAK
DIREKTORAT KAMPUS PURWOKERTO
UNIVERSITAS TELKOM
2025**

BAB I

PENDAHULUAN

A. Dasar Teori

PHP (Hypertext Preprocessor) merupakan bahasa pemrograman server-side yang digunakan untuk mengembangkan aplikasi web yang bersifat dinamis. PHP dijalankan di sisi server sehingga kode program tidak terlihat oleh pengguna, melainkan hasil pengolahannya yang dikirimkan ke browser dalam bentuk halaman web. Bahasa pemrograman ini banyak digunakan karena bersifat open source, mudah dipelajari, serta memiliki kemampuan integrasi yang baik dengan berbagai sistem basis data. PHP memungkinkan pengembang untuk mengelola data, memproses form, serta membangun logika aplikasi web secara efisien.

B. Tujuan

Tujuan dari praktikum ini adalah untuk memahami konsep dasar pemrograman web berbasis server-side dengan menggunakan PHP serta konsep pengelolaan basis data menggunakan MySQL. Melalui praktikum ini, mahasiswa diharapkan mampu mengetahui cara kerja PHP dalam memproses data dari pengguna, mengelola logika aplikasi, serta menampilkan informasi secara dinamis pada halaman web. Selain itu, praktikum ini bertujuan untuk melatih mahasiswa dalam menghubungkan aplikasi web dengan basis data sehingga data dapat dikelola secara terstruktur dan efisien.

BAB II

HASIL

A. GUIDED (Praktikum Terbimbing)

BAB III

PENUTUP

A. Kesimpulan

Berdasarkan praktikum Modul 9 yang telah dilakukan, dapat disimpulkan bahwa PHP merupakan bahasa pemrograman server-side yang mampu mengolah data dan menghasilkan halaman web yang dinamis. Melalui pembuatan program konversi suhu dan kalkulator diskon, mahasiswa dapat memahami penerapan variabel, operator, serta struktur kondisi seperti *if-else* dalam menyelesaikan permasalahan perhitungan. Selain itu, penggunaan fungsi bawaan PHP seperti *number_format()* membantu menampilkan hasil perhitungan secara lebih rapi dan sesuai kebutuhan pengguna.

Selain itu, pada manipulasi array nilai mahasiswa, PHP terbukti efektif dalam pengolahan data menggunakan array dan perulangan. Mahasiswa dapat menampilkan nilai tertinggi, nilai terendah, rata-rata, jumlah kelulusan, serta mengurutkan data nilai dengan memanfaatkan fungsi array dan struktur perulangan. Dengan praktikum ini, mahasiswa diharapkan mampu memahami konsep dasar PHP secara menyeluruh serta mengaplikasikannya dalam pengembangan aplikasi web sederhana berbasis server-side scripting.
